SUMMARY

Full-Stack Software Developer specializing in Spring Boot, .NET Core, and React. Passionate about building scalable, secure systems and leading Agile teams to deliver user-focused, end-to-end solutions.

EDUCATION

Bachelor of Computer Applications Christ University Lavasa, Pune (2024-27)

SKILLS

- Languages: Java, Kotlin, C#, Python, JavaScript, C++
- Backend: Spring Boot, .NET Core, REST APIs
- Frontend: HTML, CSS, JavaScript, React
- Databases: MySQL, PostgresSQL, SQL Server, Firebase
- Tools: Git, GitHub, IntelliJ IDEA, VS Code, Visual Studio
- Automation tools: UiPath Studio

EXPERIENCE

Software Developer Intern | CodeArrest Softwares Pvt. Ltd. Kota, India |24 June - 23 Aug 2025

Project: JobHive – Online Job Application Portal

- Developed a full-stack job portal using .NET Core (MVC) and SQL Server.
- Implemented job filtering based on title, salary, and location.
- Designed responsive UI for improved user experience.
- Integrated Entity Framework Core for efficient database operations.

PROJECTS

SimplyNotes – Full-Stack Productivity SaaS

Tech Stack: React.js, Spring Boot, Java, MySQL, Spring Security (JWT), Tailwind CSS, Framer Motion.

- Developed a secure authentication system using Spring Security and JWT, implementing personalized user registration and profile management.
- Developed a dynamic file upload system in Spring Boot to handle profile pictures and workspace assets, utilizing unique UUID mapping to prevent file collisions.
- Engineered a hierarchical data structure for Workspaces, Folders, and Notes, ensuring data integrity through JPA/Hibernate relational mapping and transactional unlinking.
- Designed a high-fidelity "Glassmorphism" UI with Framer Motion and Tailwind CSS, featuring dark mode support, real-time image previews, and responsive layouts.
- Implemented public-sharing logic using unique tokens, allowing users to generate shareable links for individual notes with read-only access.

Supervisor-feedback-analyzer - AI-Powered Supervisor Feedback Analyzer

Tech Stack: React.js, Spring Boot, Ollama (Llama 3.2), REST APIs.

- Developed a full-stack AI-powered feedback analysis system using React and Spring Boot.
- Integrated Llama 3.2 to analyze unstructured supervisor feedback and generate structured insights.
- Implemented prompt engineering, JSON extraction, and validation guardrails for reliable LLM output.
- Built REST APIs and connected frontend with backend for real-time analysis and result visualization.
- Designed a structured dashboard to display scoring, KPI mapping, evidence tagging, gap analysis, and follow-up questions.
