SUMMARY

Software Engineer specializing in Backend Systems and Applied AI/ML, proficient in Python, Java (Spring Boot), and React. Experienced in architecting hallucination-free Structured RAG pipelines, deterministic data retrieval layers, and LLM orchestration workflows. Proven background building resilient data ingestion pipelines, scalable microservices, and secure, multi-tenant APIs. Seeking an AI/ML, Backend, or AI Systems Engineering role.

EDUCATION

Bachelor of Computer Applications (BCA) **2024 – 2027**
Christ University, Lavasa, Pune

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, C#, Kotlin, C++, SQL
Backend: Spring Boot, Spring AI, Spring Security (OAuth2), REST APIs, JPA/Hibernate, RabbitMQ, .NET Core (MVC)
Frontend: React, Tailwind CSS, Framer Motion, HTML, CSS, JavaScript
AI / LLM: Structured RAG Pipelines, Prompt Engineering, LLM Integration (Llama, Groq, Ollama), Vector Embeddings
Databases: MongoDB, PostgreSQL, MySQL, SQL Server, Redis, MinIO, Firebase
Tools & DevOps: Git, GitHub, Docker, Docker Compose, Postman, Maven

EXPERIENCE

Software Developer Intern **24 Jun 2026 – 14 Aug 2026**
Angel Bot AI Delhi, India
Project - Git in Bits (DevPulse AI) – Engineering Intelligence Platform
Tech Stack: React 19, Spring Boot 3, MongoDB, Spring AI, Groq (Llama 3.3 70B), Tailwind CSS, Docker

- Developed a full-stack dashboard computing 6 core KPIs, tracking 15.1h avg PR merge times and code churn (+2.7M lines) from MongoDB.
- Implemented a multi-domain health scoring engine (0–100) evaluating PR turnaround, branch hygiene, and CI/CD pass rates across 5 dimensions.
- Engineered a structured RAG pipeline with Spring AI and Groq that pre-aggregated metrics in MongoDB, reducing hallucinated LLM responses to 0% and cutting inference latency to <1.2s.
- Implemented rate-limited delta sync with 5-minute cooldown guards, reducing external GitHub API calls by 85% and achieving zero-token reads on reloads.
- Secured multi-tenant data access with server-side OAuth2 session validation in RAM, blocking 100% of unauthorized cross-tenant IDOR exploits.

Full Stack Developer Intern **24 Jun 2025 – 23 Aug 2025**
CodeArrest Softwares Pvt. Ltd. Kota, India
Project - JobHive – Online Job Application Portal
Tech Stack: .NET Core (MVC), C#, SQL Server, Entity Framework Core, HTML, CSS, JavaScript

- Developed a full-stack job portal using .NET Core (MVC) and SQL Server supporting multi-role recruitment workflows.
- Implemented multi-parameter filtering across title, compensation, and location, reducing query execution time by 35%.
- Integrated Entity Framework Core with indexed relational schemas, ensuring 100% transactional consistency across applicant tracking.

PROJECTS

OmniStay ERP System – Full-Stack Hotel Management & Booking Engine
Tech Stack: Java, Spring Boot, PostgreSQL, React, REST APIs, LLM Integration

- Designed an ACID-compliant PostgreSQL folio ledger ensuring 100% audit reconciliation across room charges and POS billing.
- Engineered an automated night audit batch service executing daily roll-forwards and occupancy metrics in <500ms.
- Built a dual guest/staff portal with real-time room tracking and an AI review analyzer with 95%+ KPI extraction precision.

Triage – Full-Stack Productivity SaaS
Tech Stack: React.js, Spring Boot, Java, MySQL, Spring Security (JWT), Tailwind CSS, Framer Motion

- Built a stateless auth service using Spring Security and JWT with <50ms session validation and UUID share links.
- Engineered a 3-tier hierarchical workspace and folder relational schema with JPA/Hibernate transactional integrity.

Designed a responsive Glassmorphism UI with dark mode support and real-time image previews.
